

GUIDELINES

JANOME

Requirements:

- Fabric
- Lightweight fusible wadding
- Stabilizer
- Assorted thread (General and decorative)
- Plant pot or mini bucket

1. You can create your cosy any size. Measure the circumference of your pot at the widest part and the narrowest, then create a curved pattern template to wrap around your pot. Below is our template for an 11cm diameter plant bucket cosy as a guide.
2. Once you have created your pattern cut out: - 2 x main fabric, 1 x wadding.
3. Fuse the wadding to the reverse side of one main piece of fabric.
4. Place a piece of stabilizer on the reverse to support the stitches, use decorative stitches of your choice to create the desired effect.
5. Once stitching is complete place two main fabric pieces right sides together and stitch leaving a gap approx. 8 - 10 cm to turn through. (Tip: For neat corner - take one stitch at an angle when stitching around the corners)
6. Trim seams and corners and turn through to the right side. Press and slip stitch the opening.
7. Attach fasteners of your choice, if using rouleau loops, these must be done before joining the two main pieces together.
Try experimenting by splitting your pattern piece and joining different fabrics. Add applique shapes and decorative stitches.
