

JANOME

Go ahead... get creative!

**The world's leading
sewing machine manufacturer**

Journey of over 100 years

JANOME

janome.co.uk

JANOME aims to promote people's creativity and contribute to prosperity all over the world.

Since 1921, JANOME has been committed to manufacturing and has accumulated a wealth of experience.

Japanese entrepreneur Yosaku Ose founded the PINE sewing machine factory on October 16, 1921. He replaced the conventional oblong 'shuttle-type' bobbin with a round bobbin to improve the efficiency and speed of a traditional sewing machine significantly. The new bobbin was affectionately called JANOME, (pronounced: Ja – No – Mey), meaning 'the Snake's eye' in Japanese. The JANOME name became an official trademark in 1935 and was formally adopted as the company name JANOME Sewing Machine Co., Ltd., in 1954, changing to JANOME Corporation in October 2021, at its 100th Anniversary.

JANOME has manufacturing plants in Japan, Taiwan, and Thailand, exporting products to more than 100 countries worldwide. JANOME prides itself on specialised support all over the world, to both end-users and sellers of their products. Quality and customer service is paramount for JANOME products. JANOME UK was founded in October 1968 under the NEW HOME brand, changing its name to JANOME UK Limited in 1990.

Sewing machines are a vehicle to expressing creativity, by the making and personalisation of your own products. JANOME actively encourage repurposing of textiles to help promote a more sustainable lifestyle and works to improve society and culture by consistently providing valuable products and services with integrity. Our great team of nationwide retailers are always ready to showcase the latest models and to help explain their intuitive features.

What's next...

JANOME FULL RANGE

From a basic mechanical model to a fully computerised combined sewing & embroidery model, JANOME is the world's number 1 choice for sewing machines and overlockers!

Take a look through our range – we're sure you'll find just the machine to spark your creativity!

MECHANICAL

sewing machines

Mechanical sewing machines are basic entry level models, with limited features and stitches. Models can have a 4-step or 1-step buttonhole facility and may have an automatic needle threader. They can sew most fabrics and be very robust, however lower priced models in this category are better suited to sew light to medium-weight fabrics. Generally they will have a convertible free arm which is used to help sew around sleeves and trouser legs.

There are two types of bobbin systems used for mechanical models. One is a front loading system where the bobbin is inserted into a bobbin case and then slotted into a front opening on the arm of the machine. The second type is a top loading, full rotary hook system for an easy jam proof operation. This system also offers a clear view cover for the bobbin area, which allows for monitoring of the bobbin thread level.

*Just two dials...
great model to get
you started!*

A great starter machine with an extensive range of stitches, an auto four step buttonhole and a good selection of feet. Ideal for both beginners and those with more experience.

2200XT

- 22 built-in stitch choices
- Auto 4-step buttonhole
- Easy stitch selection
- Variable stitch length
- Quick foot conversion
- Drop feed for freehand embroidery
- Convertible free arm
- Soft cover

janome.co.uk/model-j3-18

J3-18

- 18 built-in stitch choices
- Auto 4-step buttonhole
- Variable stitch length
- Built-in needle threader
- Quick foot conversion
- Drop feed for freehand embroidery
- Convertible free arm
- Soft cover

The J3-18 is a very practical machine with a good range of 16 utility stitches for general sewing, plus 2 decorative stitches. The inclusion of a built-in needle threader is a real bonus.

*Practical choice for new
and experienced sewists!*

Great all-rounder,
sturdy & robust!

423S

- 24 built-in stitch choices
- Auto 1-step buttonhole
- Variable stitch length & width
- Built-in needle threader
- Quick foot conversion
- Drop feed for freehand embroidery
- Convertible free arm
- Soft cover

A solid metal body machine with a great range of stitches and features. This model is well loved in schools, where reliability and robustness are essential.

janome.co.uk/model-423s

janome.co.uk/sewist-725

725S

- 25 built-in stitch choices incl. auto 1-step buttonhole
- Built-in needle threader
- Variable stitch length & width
- Top loading jam proof bobbin
- Extra high presser foot lift
- Foot pressure adjustment
- Drop feed for free motion embroidery
- Auto-declutch bobbin winding
- LED light
- Convertible free arm
- Hard cover

The perfect modern mechanical machine for beginners to learn the stitch settings, with all the necessary utility stitches plus many more, together with a 1-step buttonhole. It's easy to start sewing, and features a built-in needle threader, top loading bobbin, and LED light. A hard cover comes as standard, and the accessories can be stored in the convenient compartment at the front of the machine.

Top loading bobbin, popular choice model!

janome.co.uk/model-j3-20

J3-20

- 20 built-in stitch choices
- Auto 1-step buttonhole
- Variable stitch length
- Built-in needle threader
- Quick foot conversion
- Drop feed for freehand embroidery
- Convertible free arm
- Soft cover

An upgraded version of the J3-18 with 16 utility stitches plus 4 decorative stitches and a 1-step buttonhole. This is a robust, easy to use, all-round sewing machine.

Easy to use, with a 1-step buttonhole!

HD2200

- 22 built-in stitch choices
- Auto 1-step buttonhole
- Built-in needle threader
- Top loading jam proof bobbin
- Superior 7 Piece Feed System (SFS)
- LED light
- Drop feed for free motion embroidery
- Foot pressure adjustment
- Robust metal body
- Convertible free arm
- Hard cover

The HD2200 combines power with features, elegance and simplicity. The metal body provides the robustness required by schools and heavy domestic users, whilst the design makes it so easy to use. Choose your stitch and the information window will advise on stitch width and length settings, plus indicate the correct foot to use. It has a great range of stitches with an auto needle threader and auto one step buttonhole... sewing just couldn't be easier!

janome.co.uk/model-hd2200

Easy settings at-a-glance

janome.co.uk/model-j3-24

J3-24

- 24 built-in stitch choices
- Auto 1-step buttonhole
- Variable stitch length & width
- Built-in needle threader
- Drop feed for freehand embroidery
- Convertible free arm
- Hard cover

Top of the J3 series, this model offers the facility of variable stitch width & stitch length adjustment, allowing maximum benefit from the 16 utility, plus 8 decorative stitches. A hard cover provides great protection when the machine's not in use.

Stitch width & length adjustment, plus a hard cover!

COMPUTERISED

sewing machines

Computerised sewing machines are suitable for both beginners and more experienced sewists. They are more versatile machines with added features which help to make sewing easier, with more precise control and greater needle penetration power to easily handle thicker and speciality fabrics. Everything is made easy, as these machines offer many different stitch options which are selected by pressing a key, or using the LCD touch display screen.

Computerised models feature the ability to precisely control the sewing speed and adjust the stitch settings. Some models may have a memory facility to memorise favourite stitches and stitch combinations. A lock stitch button finishes off all of your ends and a scissors button can trim threads automatically before removing the fabric. A built in alphabet is perfect for sewing name tags and personalising projects.

atelier 

Take your sewing to a new level with a computerised larger-arm space model. These machines are perfect for those who need all the best and easiest computerised functions, plus additional arm space for larger projects such as bridal wear, quilt making, home furnishings and creative thread painting. The sheer length of the arm space, 210mm (8 ¼") to the right of the needle gives you space to create.

These machines are a powerful tool to enhance your creativity with power, precision, and spectacular stitch quality. Choose a 9mm stitch width model to further enhance the decorative stitches.

janome.co.uk/atelier-3

ATELIER 3

Larger arm space with free arm and a clear LCD screen to help you select from the 120 built-in stitches, including 7 auto 1-step buttonholes and an alphabet with 7mm stitch width. LED lighting, an easy set bobbin, an automatic needle threader, a maximum speed controller, a Start/Stop button, auto-lock, and auto thread cutter all help make your sewing easier.

Optional quilting kit available

Extra space for all types of sewing!

janome.co.uk/atelier-6

ATELIER 6

With 210mm (8 1/4") of arm space to the right of the needle, this amazing free arm machine has 196 built-in stitches, 9mm stitch width, an under-bed cutter and knee lifter. The superior AcuFeed™ Flex layered fabric feeding system, ensures stable sewing at speeds of up to 1,000spm. The LCD screen has 8 direct stitch selection keys for commonly used stitches, plus easy access to functions. All the refinements at your fingertips to help you create your dream projects, with an extension table included.

3 x optional kits available

Larger arm space & 9mm stitch width!

janome.co.uk/atelier-7

ATELIER 7

Larger 210mm (8 1/4") space with free arm. Quilters and designers will enjoy the AcuFeed™ Flex layered fabric feeding system. This machine has 240 built-in stitches, including 11 buttonhole choices and 7 alphabet types. With 9mm stitch width, a clear LCD screen, an auto thread cutter, an easy set bobbin, a pop-up needle plate, auto pivot function and an adjustable knee lifter. There is also a USB port for use with Stitch Composer, where you can create your own stitch designs.

3 x optional kits available

Auto presser foot lift for easy pivoting!

 - 170 x 200mm

janome.co.uk/atelier-9

ATELIER 9

This combined sewing and embroidery machine has exciting, easy to-use features, with WiFi, variable zig zag and the Janome stitch tapering function.

There are 300 built-in stitches with 250 built-in embroidery designs, plus fonts included. Embroider designs of up to 200,000 stitches, embroidery couching, cutwork, jump thread trimming and there's a full colour LCD screen. Plus easy access to Janome's unique 'Sewing Applications' for all your regular sewing tasks. This is an amazing free arm machine with a large workspace, AcuFeed™ Flex and an auto presser foot lift.

3 x optional kits available: Quilting, Fashion & Finishing, Crafting & Home Decor.

See optional Artistic embroidery design software and downloadable Apps

Auto-thread tension

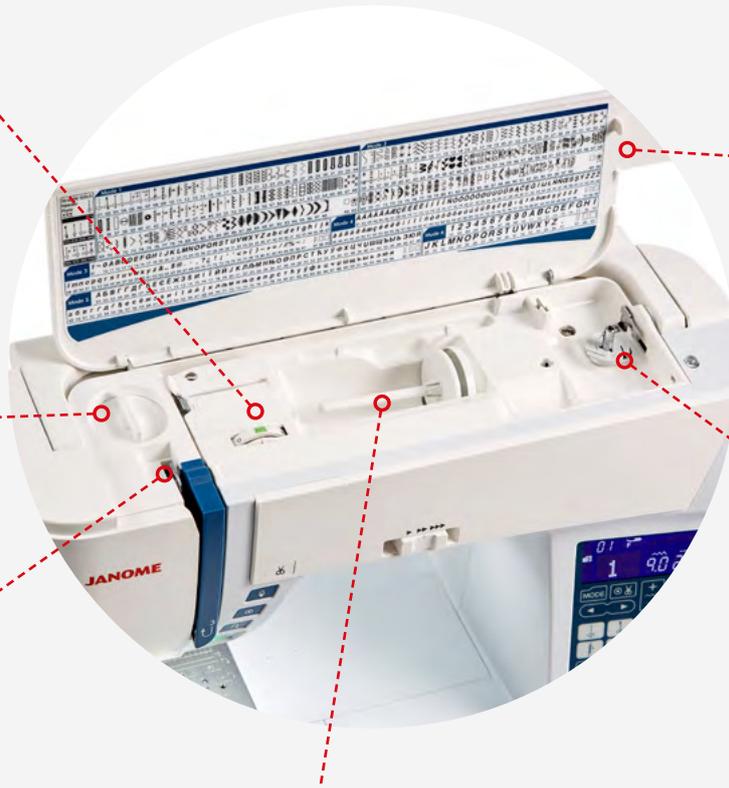

For general sewing, set the tension dial at AUTO. This setting covers a wide range of sewing conditions. Check your instruction manual for settings.

Foot pressure dial

The pressure of the foot can be adjusted, for example release the pressure slightly when stitching appliqué to help turn corners smoothly.

Thread take-up lever

Raise to the highest position before threading the machine.

Stitch library

On computerised models to access the selection of different stitches available, simply select the stitch mode and key in the stitch number required. Each stitch has an automatic default setting for width and length.

Bobbin winder

Thread from the spool winds onto the bobbin keeping an even tension. When the bobbin is fully wound it will stop automatically. Some models have an independent bobbin winder where you don't have to unthread the machine to refill the bobbin.

Spool holder

For smooth feeding of thread, simply load the thread spool horizontally and use the correct size end cap to firmly secure the thread in place whilst sewing.

Maximum speed control slider

This function is only available on computerised machines. It sets the maximum sewing speed of the machine, irrespective of how far the foot controller is depressed. Perfect for building confidence or setting a constant speed.

Hand wheel

Always rotate towards you, to raise the needle and release your work.

Stitch adjustment

Use to refine default stitch settings for stitch width and stitch length. Some models have a favourite stitch memory facility, allowing you to save and recall your preferred settings.

Stitch selector

On computerised machines it is easy to select a stitch by pressing a key or using a touch pad. On more basic machines, the stitch selector is usually a manual dial.

Free arm

A free arm is a cylinder on the bed of the machine which allows you to sew around items such as sleeves and trouser legs. Detach the accessory box to reveal the free arm.

Knee lifter

This allows you to raise and lower the presser foot keeping both hands on the fabric. The knee lifter is a drop-down extension bar that fits into the slot and is extremely helpful when pivoting, sewing appliqué, curves, patchwork & quilting.

Threading guides

Place the thread in the easy to follow numbered channels for upper threading of the machine.

Thread cutter

Convenient thread cutter which can be used with one hand.

Auto 1-step buttonhole lever

With a 1-step buttonhole facility the size of the buttonhole is automatically determined by the button size. Just place the button into the sliding buttonhole foot, attach the foot to the machine, pull down the tucked away lever and stitch. Perfect buttonholes every time!

Feed dogs

These are saw-shaped teeth that move the fabric through the machine as the needle stitches. The Janome Superior Plus Feeding System (SFS+) feature, is not only a seven-piece feeding system but also a flat feed mechanism that moves the feed dogs parallel to the needle plate, in both forward and backward directions to hold the fabric firm and prevent puckering. The feed dogs can be dropped for free machining.

Needle threader

A pull down gadget to aid threading the machine needle. Just align the needle, pull down the threader, lay thread across in front of the needle, release the lever and the needle is threaded!

Needle plate

The metal needle plate fits over the bobbin/feed dog area and has seam guides engraved on it. The markings help measure the seam width whilst you guide the stitching.

Presser foot

The presser foot holds the fabric in place against the feed dogs so that it doesn't move about whilst you are sewing. Most general presser feet are quick change, snap on type.

Thread cutter (scissors) button

When pressed this button will automatically trim the upper and bobbin threads, helping you to easily release your fabric.

Needle up/down button

This function allows you to programme the needle to always finish in the up, or down position... great for pivoting on corners!

Auto-lock button

An amazing time saving feature which locks off the ends of stitching and stops the threads unravelling. Also helps to fully complete decorative stitches when pressed as you start stitching.

Reverse sewing button

When pressed this allows you to sew a few stitches or to stitch continuously in reverse.

Start/Stop button

This button enables the machine to be used without the foot control. Perfect on long runs of stitching and can assist anyone who finds it difficult to use a foot control.

Top loading easy set bobbin mechanism

Thread is wound onto the bobbin which is dropped into the machine and enclosed by a clear hook cover plate. You can see when the thread is running out! An easy set bobbin allows you to start sewing without pulling up the threads.

Presser foot lifter

Always raise before threading the machine so that the thread sits between the upper tension discs.

Presser foot holder

To assist in sewing different processes a variety of different feet can be attached. Just press the button to release the foot.

WORLD'S MOST ADVANCED SEWING MACHINES THE PROFESSIONAL SERIES

THE PROFESSIONAL SERIES

janome.co.uk/model-hd9

HD-9 PROFESSIONAL *(Straight stitch only)* HEAVY DUTY

- High speed sewing: 800 – 1,600spm
- Maximum speed control slider
- 225mm (Approx. 9") wide x 140mm (5.5") high work area
- Jumbo bobbin holds 40% more thread than normal bobbins
- Independent bobbin winding
- Pressure indicator window
- Auto thread cutter (scissors button)
- Variable stitch length up to 6mm
- Adjustable knee lifter
- Painted aluminium body

The perfect flat bed, high speed, straight stitch only machine!

*Spacious, streamlined
and steadfast!*

MC6700 PROFESSIONAL

- All metal flatbed machine
- Speed up to 1,200spm
- Maximum speed control slider
- 200 built-in stitches incl. 2 fonts + 9mm block capitals
- Superior needle threader
- 9mm stitch width with 91 needle positions
- Built-in AcuFeed™ Flex
- 3 LED lights
- Large spool holders
- Independent bobbin winder
- Adjustable knee lifter
- Professional grade foot and easy change needle plate (3 needle plates included)
- Favourite stitch & memory facility
- Foot control with cord storage

janome.co.uk/mc-6700p

THE PROFESSIONAL SERIES

The longer arm range have all the features you require whether you are a dressmaker, a quilter or simply love sewing. 9mm stitch width is standard and some models even allow you to design your own decorative stitches. Select a model with the built-in AcuFeed™ fabric feeding system and 'Sewing Applications', Janome's unique feature where you can find useful sewing applications. You'll be ready to sew zips, blind hems, buttons, quilting, ruler work, patchwork and lots more! Choose the fabulous free-arm MC9480 QC Professional, a flat-bed model like the MC6700P or straight stitch only HD9 where you have space, speed, and stability.

The ultimate Continental M8 Professional, flat-bed model has an arm space of 343mm (13.5") to the right of the needle and a speed of up to 1,300spm. The latest MC9480 QC Professional and the CM8 Professional models have both A.S.R. (Accurate Stitch Regulator) for perfect free motion stitches every time.

Computerised long-arm machines are perfect for those who require all the best and easiest computerised functions, plus additional arm space for larger projects. The sheer length of the arm space, the power and spectacular stitch quality will leave you free to discover more, wherever your sewing journey takes you.

THE PROFESSIONAL SERIES

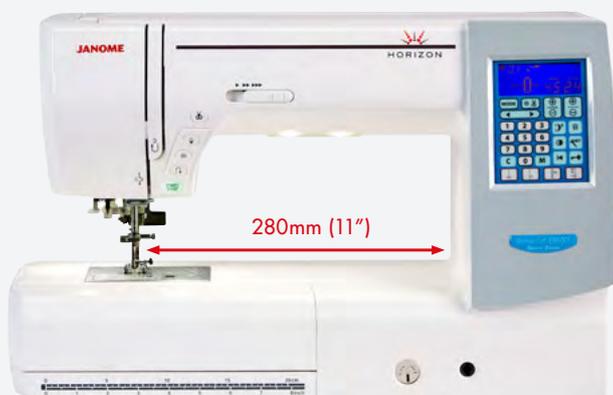

Dream machine, especially for quilters!

MC9480 QC PROFESSIONAL

- A.S.R. (Accurate Stitch Regulator) includes ruler work foot
- 400 stitches including 4 alphabets, 11 Auto 1 step Buttonholes
- 9mm stitch width
- HD colour screen
- Free arm
- Speed up to 1,060spm
- AcuFeed™ Flex layered fabric feeding system
- Professional grade foot (HP-2) & needle plate. (3 plates included)
- Sewing Applications
- Floating mode
- Stitch tapering
- Mirage stitches
- Automatic presser foot lift, pivot function
- Auto one-touch needle plate conversion – 3 plates included (zigzag, straight & HP Professional)
- Professional grade foot (HP-2)
- Dials for fine tuning stitch width & length
- Locking ON/OFF button for the beginning of quilt stitches
- Large extension table
- PC Software Stitch Composer
- AcuSpark 2 (QR Code App) for support & inspiration

janome.co.uk/model-mc9480-qcp

janome.co.uk/horizon-8200

MC8200QCP

SPECIAL EDITION

- 280mm (11") large arm space with free arm
- 9mm stitch width
- 170 Stitch choices including 10 auto 1-step buttonholes
- Alphabet for monogramming
- Built-in AcuFeed™ system
- Easy change straight stitch needle plate
- Adjustable knee lifter
- Easy set, drop-in bobbin
- Easy bobbin winder with cutter

Great all-round choice!

This incredibly sturdy, powder coated metal, seamless flatbed machine provides an expansive sewing area with 343mm (13.5") to the right of the needle and a spacious height of 140mm (5.51"). The most powerful penetration and needle piercing capabilities in home sewing.

LONGER ARM SPACE

CONTINENTAL M8 PROFESSIONAL

THE PROFESSIONAL SERIES

CONTINENTAL M8 PROFESSIONAL

- A.S.R. (Accurate Stitch Regulator) includes ruler work foot
- 450 stitches, 5 alphabets, 13 Auto 1 step Buttonholes
- 9mm stitch width
- Large HD colour screen
- AcuFeed Flex (Electronic) for flawless fabric feeding system
- Powerful efficient DC brushless motor
- Speed up to 1,300spm
- Auto one-touch needle plate conversion – 3 plates included (zigzag, straight & HP Professional)
- Professional grade foot (HP-2)
- Sewing Applications
- Quilt Block Advisor
- Floating mode

Revolutionary **A.S.R.**

(Accurate Stitch Regulator)
for free motion freedom!

Included feet:

Open toe, Closed toe,
Clear view & Ruler work

Also available with MC9480 QC Professional

- Stitch tapering
- Mirage stitches
- Automatic presser foot lift, pivot function
- Independent bobbin winding motor
- Thumb wheel for added convenience
- Optical bobbin monitoring
- Enhanced feed dog design
- Knee lift for variable zig zag
- Large extension table with drawer
- PC Software – Stitch Composer, Quilt Block Advisor & Screen Saver Tool
- AcuSpark2 App available for support & inspiration

OVERLOCKER & COVERSTITCH machines

	9300DX	6234XL	Air Thread 2000D Pro	1200D Pro	CoverPro 2000 CPX	CoverPro 3000 P	Stitch variations
01			✓				01. 5 THREAD STITCH A true 5-Thread industrial stitch consists of the two stitches sewn simultaneously. 2 threads form the chainstitch and 3 threads form the overlock. This stitch is used for medium to heavyweight woven fabrics and is perfect for garment construction and soft furnishings.
02	✓	✓	✓	✓			02. 4-THREAD SAFETY STITCH An overlock stitch that employs two needles. The stitch stretches without breaking. The second needle thread reinforces the durability and strength of the stitch, but the stitch retains its elasticity. Excellent for sewing knit & loose fitting woven garments.
03				✓			03. STRETCH KNIT STITCH The same characteristics as the Safety 4-Thread stitch. The Stretch Knit Stitch uses the differential feed and stitch length settings to prevent knitwear from stretching while sewing. Common uses are applying ribbing to knit necklines, cuffs or waistbands.
04	✓	✓	✓	✓			04. 3 THREAD STITCH Three threads lock together on the fabric edge to form a balanced stitch. The wide overlock stitch is suitable for garment construction on medium to heavyweight fabrics and knitwear and as an edge finish on single layer fabric. The narrower version of this stitch is suitable for light to medium fabrics and commonly used for garment construction on lingerie and as an edge finish on a single layer of fabric.
05	✓	✓	✓	✓			05. NARROW HEM Three threads form a balanced stitch that is a great narrow edge finish commonly used for hemming on scarves, napkins and ruffles. Also used for garment construction on undergarments made of lightweight knit fabrics.
06		✓	✓	✓			06. 2-THREAD STITCH The needle and lower looper threads form an edge finish that is lightweight and flat which is commonly used as an open seam edge on lightweight fabrics.
07	✓	✓	✓	✓			07. ROLLED HEM – 3 Thread Three threads form an unbalanced stitch. When the stitch is formed, the fabric is rolled inside the stitch. Excellent for hemming on medium to lightweight fabrics and can be used to create decorative pintucks.
08		✓	✓	✓			08. ROLLED HEM – 2 Thread Since there are only 2 threads, the result is lighter and finer than the 3 thread version. This is suitable for fabrics like chiffon and also used for bridal veil edging.
09				✓			09. STRETCH WRAPPED A stretch stitch that uses two needles and the lower looper. This stitch provides the maximum stretch: the second needle thread increases the stitches durability. It is a perfect choice for garment construction on exercise and swimwear.
10	✓	✓	✓	✓			10. FLATLOCK Three threads form an unbalanced stitch that can be pulled open into a flat seam. The seam resembles the top stitch seen on ready-to-wear sweatshirts and knit sportswear and is commonly used for garment construction on bulky knitwear or as a decorative accent. The two thread version is used for construction of under garments and as a hemming technique.
11				✓			11. BLANKET STITCH An edge finish that uses decorative thread in the needle. The upper and lower looper threads pull the needle thread so it is visible on both the top and underside of the fabric. This is an excellent stitch to finish a single layer of fabric like a blanket or felted scarf or used as a decorative accent.
12			✓	✓	✓		12. TRIPLE COVER HEM This stitch uses three needles and the chain looper to form 3 lines of what looks like parallel straight stitches. Commonly used for Hem finish, topstitching and creating belt loops.
13			5mm OR 2.5mm	6mm OR 3mm	6mm OR 3mm		13. COVER HEM WIDE & NARROW A version of the cover hem that uses two needles and the chain looper to form two lines of what looks like parallel straight stitches. Commonly used for Hem finish, topstitching and creating belt loops. The narrow version of this stitch can also be used for creating pin tucks.
14			✓	✓	✓		14. CHAINSTITCH A 2-thread chainstitch or double chainstitch uses one needle and the chain looper to form a straight stitch. The chainstitch is stable for stretch fabrics and can be used for garment construction on woven fabrics to create an open seam allowance, to sew knitwear together where elasticity is required and to sew on bias tape. This stitch can also be used to create decorative effects.
15			✓		✓		15. TOP COVER STITCHES (Triple, Wide and Narrow) A decorative industrial type topstitch. It uses two or three needles, top cover "hook" and the chain looper to form a cover hem with loops on both the top and bottom side of the fabric. This stitch is commonly used for hemming and topstitching on light to medium weight fabrics. This stitch can also be used to create decorative effects.

Gathering and many decorative finishes such as pintucks, picot and lettuce-leaf edgings can be created using Janome overlockers. Fabulous creative and professional results can be achieved with these highly versatile and robust machines.

A professional finish every time...

Save time and professionally finish projects inside and out, on even the finest stretch knits and speciality fabrics! The main benefit of an overlocker (also known as serger) is that it can sew a seam, finish the edge and trim off the excess fabric all in one step. Unlike sewing machines, overlockers cannot sew buttonholes or zips. You can sew a seam together and finish the edges at the same time with a 4 thread finish. For open seams use a 3 thread finish and create fine rolled hems with 3 or 2 threads on the finest of fabrics. See the air threading AT2000D Professional for the easiest threading overlocker we've ever made!

Hemming stretch fabrics is easy with a coverstitch machine. Parallel rows of straight stitching are created on the fabric right side and stitching covers the raw hem on the fabric reverse side. The CoverPro 3000 Professional even has a top cover hem, like you'll find on sports garments.

The 1200D combined overlocker and coverstitch model also has decorative stitching options, such as a blanket hem finish plus a simultaneous top and bottom coverstitch for an industrial style cover hem finish.

An extensive range of optional accessories are available for all Janome overlockers and coverstitch models.

janome.co.uk/model-9300dx

9300DX

- 3 or 4 thread overlocking
- Easy rolled hem conversion
- Differential feed
- Retractable upper knife
- Sews up to 1,500spm

JANOME

EMBROIDERY

Part of the computerised sewing machine range includes combined sewing and automatic embroidery models and stand-alone dedicated embroidery only models! These machines are loaded with features and can stitch out pre-programmed embroidery designs, perfect for personalising your sewing. There are many built-in designs and additional pre digitized designs can be imported.

Optional digitizing software is available to create or edit designs. If you already have a sewing machine you love, just add an embroidery only model which will embroider whilst you are still sewing... a perfect combination!

Artistic[®] DIGITIZER

Optional embroidery design software

Create professional level embroidery with Janome Artistic Digitizer Software.

Stunning embroidery quality results, without needing to be an expert! No more operating system dilemmas. ONE Software for MS Windows[®] and Mac OS[®].

The full version of Artistic digitizer includes tools for creating original designs with advanced editing features, point stitch, quilting motifs and more. Whilst the Junior version has reduced features for simple embroidery tasks, without compromising quality.

Over 60 tutorial videos available directly in the software. Enjoy your creations.

SOFTWARE

Go ahead... get creative!

Embroidery Only Magic!

Open up a new world of possibilities with the Janome MC550E Limited Edition.

The perfect sewing companion to personalise projects. It's easy and fast with embroidery speeds of up to 860spm. Explore the rewarding joys of embroidery with the 4 included hoops and AcuStitch (PC compatible software).

janome.co.uk/mc-550e

Hoops included:

- 200x360mm
- 140x200mm
- 200x200mm
- 140x140mm

Bonus:

AcuStitch Software, USB flash drive with 30 exclusive large designs

MC550E Limited Edition

- 180 embroidery designs built-in, plus 6 embroidery fonts
- 2 and 3 Letter monogramming
- Full colour LCD touchscreen
- Design transfer via USB
- On-screen editing functions include enlarge/reduce, rotate, flip, drag and drop, arc, combine, copy, and paste, grouping, corner layout, single colour sewing, zoom
- Programmable jump thread trimming
- Flexible stitch traveling (by units of 1, 10, 100 and 500)
- Embroidery format: JEF, JEF+ and JPX
- Up to 200,000 stitches per design
- Direct jump to desired stitch point
- Built-in needle threader
- Anti-kink thread device
- Auto return post thread break
- Auto thread tension control
- Auto thread cutter (scissors button)
- Adjustable hoop positioning
- Auto centre for designs
- Easy set bobbin
- Bobbin winding plate with cutter
- Bobbin thread sensor

For limitless embroidery possibilities, optional Artistic embroidery design software is available which can convert artwork into stitches and stitches into works of art.

What you don't see matters!

If QUALITY could be viewed in a glance, JANOME machines would sparkle with glitter.

In an era of disposable products, a JANOME is built to last. The traits that are the foundation of a JANOME are subtle attributes like precision stitching, reliable performance, and consistent results. Our reliability comes from careful attention to design with uncompromising specification standards like:

- Solid metal frame construction
- Noise dampening engineering
- Metal to metal fastening
- Weight saving, reinforced design
- Long-life nylon gears
- High calibre, solid metal drive and needle shafts
- Metal bobbin winding mechanisms
- Fully encased, self-cooling motors
- Internally defined structure
- Fade, chip, and crack resistant ABS resin

Accessory and replacement parts are also readily available. And, most importantly you have the support and knowledge of a local JANOME retailer.

AcuFeed™: is Janome's exclusive dual feed system, which is used to feed both the top and bottom layers of fabric evenly under the presser foot so that the fabric does not pucker. This device is extremely effective to eliminate slippage especially when sewing hard to feed materials such as PVC coated fabric or leather.

AcuFeed™ Flex: is the capability to change the foot holders and feet for many types of sewing applications. Some models come with a wide AcuFeed™ Foot holder, a Zig-Zag foot AD plus an AcuFeed™ Flex professional grade foot HP2 for use with the HP needle plate. This narrow (HP2) professional grade foot provides superior visibility and is perfect for sewing curves and precise topstitching.

A.S.R. (Accurate Stitch Regulator): The A.S.R. foot holder reacts to movement of the fabric and provides the same stitch length for free motion, ruler work or variable zigzag.

Auto 1 step buttonhole: The buttonhole size is automatically determined when the buttonhole lever is pulled down and a button placed in the sliding buttonhole foot.

Automatic buttonhole foot with stabiliser plate: Uneven layers of fabric are no longer a problem. Simply attach the buttonhole foot (R) into the stabiliser plate to ensure perfect buttonholes, every time.

Auto presser foot lift: If this application is turned on, the presser foot will automatically go up when the machine stops. This feature is very useful when turning corners and quilting.

Auto-thread tension: This setting covers a wide range of sewing conditions.

Auto reverse: Perfect to automatically reinforce stitching at start and end of seams.

Bobbin mechanisms:

• **Front loading bobbin:** Found on mechanical models where the bobbin is set into a holder before going into the machine.

• **Top loading bobbin:** Easy to use, just drop into the machine and pull up the thread. You can see when the thread is running out! Full rotary hook bobbin models, allow you to run off the end of your fabric without causing jams!

• **Easy set bobbin case and cover:** The specially designed bobbin case and cover mean there's no need to pull long thread tails up when you first thread the machine. Slip the bobbin thread in the cover plate guide; the built-in cutting blades trim the tail to the correct length for a super-clean start to your stitching. After the initial threading, the auto-thread cutter takes care of trimming and re-setting the tails each time.

• **Bobbin winder:** Thread from the spool winds onto the bobbin keeping an even tension. When the bobbin is fully wound it will stop automatically.

• **Bobbin winding with thread cutter:** Don't forget to use the specially designed handy thread cutter which makes bobbin winding quick and easy.

Cloth guide: An optional accessory with most machines. Some embroidery models have a clear attachment which fits into the embroidery unit to set the seam distance. (See Atelier 9). Perfect deeper seams on furnishings.

Differential feed: Controls movement of both front and rear feed dogs.

Easy threading: All Janome sewing machines have a clearly indicated threading path and most models have a needle threader to help get you started.

Elongation button: This feature allows some satin stitches to be elongated, up to 5 times.

Embroidery couching: Enjoy embellishing your work with yarns for embroidery couching. (See Atelier 9)

Favourite stitch setting: On some models you can save customised stitch settings. Stitch length/width, presser foot pressure and thread tension.

Feed dogs: The saw-shaped teeth ensure the fabric moves through the machine as the needle stitches. These feed dogs can be dropped for free motion embroidery or quilting. Some models have auto drop feed dogs so when the presser foot rises, the feed dogs will drop automatically making it easy to set thick fabric. (See CM7P).

Fine mode switching lever: See CoverPro machines.

Floating mode: You can decrease layer slippage and wrinkles by lifting the presser foot slightly in the floating mode.

Foot control: Just like driving a car, this pressure pad allow you control the machines motion and to stay hands free to support your sewing.

Foot control with thread cutter: The larger foot control also has a thread cutter on the foot operated pedal.

Foot pressure dial: The pressure of the sewing foot can be adjusted, for example when stitching applique to help turn corners smoothly.

Free arm: The accessory box section of the machine will pull away to reveal a narrow cylinder-shaped arm which can be used for sewing around cuffs and trouser legs.

Hand stitch style: Function to add distortions to designated stitches to make them look more natural/casual.

Hand wheel: Operates the needle to form the stitch. Always turn towards you.

Knee lifter: The knee lifter bar fits into the front of the machine and allows you to use your knee to operate the presser foot when still keeping both hands on the fabric. This is a favourite feature with quilters and is extremely helpful when pivoting, sewing appliqué, curves, patchwork & quilting.

LCD information screen: Found on computerised models, use the keypad to select stitches and view settings, correct foot required on a clear LCD screen.

LED lighting: Makes sewing clearer so you can sew well into the night.

Lock stitch button: Just press to lock your stitches. This also helps when you're starting or ending a stitch or stitch combination, as it locks off at the end of the stitching sequence.

Mirage stitches: Sew Mirage stitch and open the fabric to make patterns without connecting straight stitches.

Needle plate: The metal needle plate fits over the bobbin/feed dog area and has seam guides engraved on it to help measure the seam width whilst stitching. Some models also have cornering guides and patented angle marks to give you more sewing precision.

Needle plate – Angle scales: By using the angle scales on the needle plate, you can easily seam patchwork pieces at the desired angle. The angle scales are marked at 45, 60, 90 and 120 degrees.

Needle threader: A pull down gadget for threading the machine needle automatically. The one-hand needle threader when depressed, stays in the down position for more control and extra easy threading.

Needle up/down facility: This allows you to programme the needle to always finish in the up or down position... great for pivoting on corners!

One Step™ Plate Converter: When sewing with lightweight fabrics, or piecing quilts, a straight stitch needle plate makes all the difference. The One Step™ Plate Converter allows you to easily switch and use the perfect plate for your project. Simply press a button to release one plate; then snap a new one in place – it takes only seconds, with no screwdrivers required, (See the CM7P as this is automatic!) The enhanced straight stitch plate allows for users to move the needle slightly on the straight stitch plate for scant 1/4" seams. This system also includes a sensor that will only allow an appropriate stitch to be sewn when the straight stitch needle plate is in place.

Optic magnifiers: When you need to get a closer view attach an optic magnifier. x 20, x 40, x 60 available. Comes as standard on some models (See 5270QDC).

Presser foot: The presser foot holds the fabric in place against the feed dogs so that it doesn't move about whilst you are sewing. To assist in sewing different processes a variety of different feet can be attached to the presser foot holder. Most presser feet are quick change, snap on type.

Quilt block advisor: Automatic calculation function for quilt patterns: Nine patch, Mosaic, Lemon star, Log cabin, Grandma's Garden and Baby Blocks. (See CM7P)

Retractable built-in light: In addition to LED lights some models are equipped with a retractable sewing light which will turn on automatically when you slide it forward. Perfect to illuminate the working area. (See MC9450QCP and CoverPro 3000P).

Reverse sewing button: This allows you to sew a few stitches or to stitch continuously in reverse.

Speed control slider: This function is only available on computerised machines. It sets the maximum sewing speed of the machine, irrespective of how far the foot controller is depressed. Set the speed to your comfort, can help build confidence or assist with complex sewing tasks.

SPM: The speed at which the machine stitches per minute.

Stitch adjustment: Use to override default stitch settings for stitch width and stitch length.

Sewing Applications: This is a unique feature to help give easy access and guidance on the appropriate stitch setting for a specific sewing task and fabric type.

Stitch Composer – is Janome's software program which allows you to design your own stitches.

Stitch selector: On computerised machines it is easy to select a stitch by pressing a key or using a touch pad. More basic machines generally have a dial for the stitch selector.

Superior Feed System: The 7-piece feed dog system ensures smooth feeding of fabric and a superior stitch quality when sewing light to heavy weight fabrics.

Superior Feed System Plus (SFS+): The Superior Feed System Plus features a unique 7-piece feed dog system that stays parallel as it moves up and down, maintaining constant contact with the fabric. This 'flat feed' technology provides better control, whether sewing forward or backward.

SFS-i: Janome's intelligent feeding system, when you begin sewing the presser foot lowers and the feed teeth raise automatically. When the foot raises the feed teeth will lower for the easy removal of fabric.

Start/Stop button: This enables you to use the machine without the foot control.

Stitch library: On computerised models to access the selection of different stitches available, simply key in the stitch number required.

Stitch tapering function: Choose from a broad selection of taper-ready stitches, set the desired stitch angle and number of pattern repeats or mirror image a design to create tapered corners and points.

Seam Tightening System (STS): See CoverPro machines.

Tension Lever Control (TLC): Easily change from heavier cotton knits to tricot, light cotton, sheer, home dec or bridal fabrics at the flip of a switch. With TLC you don't have to adjust tension for flat seams, or even when switching between fabric types. This unique feature automatically softens the looper tension for perfect stitching on a wide variety of fabrics.

Thread cutter: The single-handed thread cutter is conveniently positioned on the side of the machine and can be used with a one hand swipe when finishing a seam.

Thread cutter under-bed: (Scissors button) Press the thread cutter button to cut the top and bottom threads after sewing. You can continue sewing without pulling the bobbin thread up after trimming the threads. On some machines this function can be set to cut after using the lock stitch or memorised in the stitch patterns.

Threading guides: These are the easy-to-follow channels for upper threading of the machine.

Turn Over Memory (TOM): Mirror image your stitch selection and view onscreen before stitching.

User Friendly: From threading to loading your bobbin, it's easy to get started. Settings are intuitive whether you are using a mechanical or computerised Janome model.

Variable zig zag: A unique feature which allows you to control the zig zag width with the knee lifter. Great for thread painting!

Vertical needle drop: The same familiar vertical needle action of a sewing machine allows improved stitching and better fabric penetration. (See CoverPro models).

Wide angle white LED lighting: Offers greater illumination for all your sewing projects.
